

Hardy Filtration

Integrated filtration solutions: air, water & oil

AM Throwaway Filters

AM-5 / AM-1

Description

The AM filter, with a wire frame, is an excellent alternative to cardboard frame type air filters.

This type of filter is used in light commercial and residential applications.

For the building operator who has fan coil units and peripheral systems, these filters are easy to change and are flexible for those tight areas.

A regular preventative maintenance system should be set up to ensure the filters don't block. For light applications, this product has excellent dust loading.

AM-5

Characteristics

- » The dry polyester is sewn around a wire support with the excess media providing an excellent seal around the perimeter of the wire and the holding frame.
- » The polyester media is very resistant to high levels of humidity.
- » One piece internal support wire.

AM-1

Advantages

- » Cost effective especially on special size filters.
- » Very easy to handle and transport.
- » Flexibility allows for easier installation in tight places where cardboard frames could break or be damaged.

Models	Thickness	Initial Resistance (In. Wg.)	Final Resistance (In. Wg.)
AM-5	1/2"	0.12	0.5
AM-1	1"	0.15	1
